Design of a Food Delivery Mobile Application using RAD Model

Rapid Application Development (RAD) is a software development methodology that focuses on fast development using prototypes and continuous user feedback. It is highly suitable for UI/UX-based applications where user interaction is critical.

In this experiment, a **Food Delivery Mobile Application** is designed using the RAD model. The application allows users to browse restaurants, order food, track delivery, and make payments efficiently.

Phase 1: Requirements Planning

In this phase, system requirements and user needs are identified.

◆ 1) Key Features

Navigation:

- Home (Restaurant browsing)
- Menu Screen
- Cart
- Order Tracking
- Payment

User Actions:

- Search restaurants
- View menu items
- Add items to cart
- Place order
- Track delivery
- Make payment

◆ 2) Requirements List

1. User should be able to search restaurants by name or cuisine
2. System should display menu items with price and ratings
3. User should be able to add/remove items from cart
4. User should be able to place an order
5. System should show delivery tracking details
6. User should be able to make online payment
7. User should be able to rate food and delivery

Phase 2: User Design

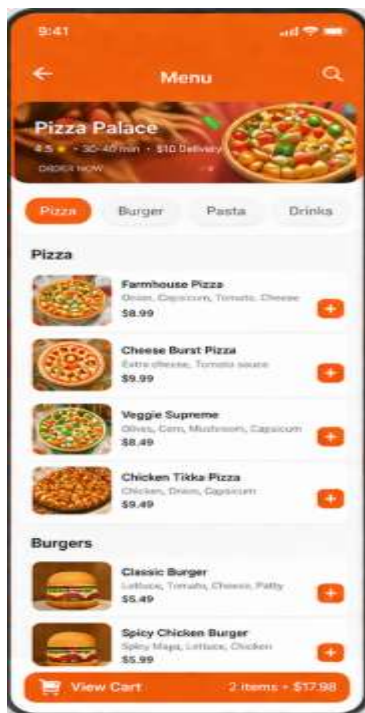

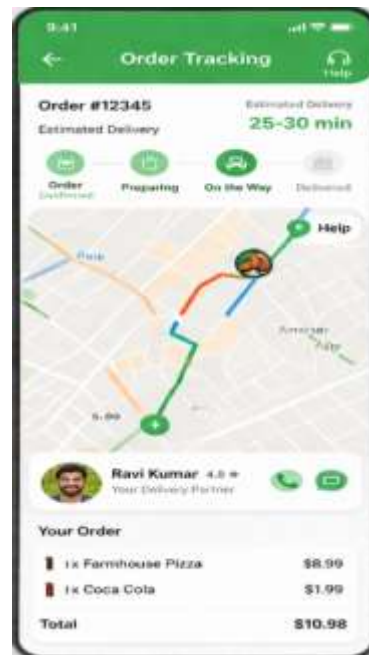

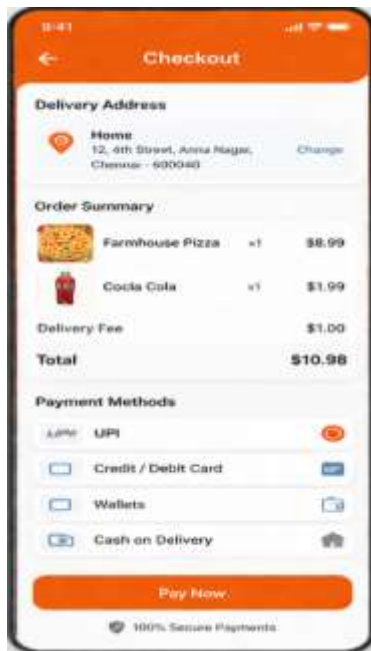

In this phase, UI screens and prototypes are created.

1) Tool Used

- Figma

2) Wireframes Designed

- **Home Screen:** Displays restaurants and search bar
- **Menu Screen:** Shows food items with images and prices
- **Cart Screen:** Displays selected items and total amount
- **Order Tracking Screen:** Shows delivery status
- **Payment Screen:** Allows payment and confirmation

3) Design Features

- Used light theme with vibrant colors
- Designed card-based layout for food items
- Added icons for navigation clarity
- Ensured smooth and simple user flow

Phase 3: Construction

This phase involves building and refining the prototype.

1) Interactive Prototype

- Screens connected using Figma prototype
- Navigation flow:
Home → Menu → Cart → Payment → Tracking

2) Dynamic Elements

- Add to cart functionality simulation
- Order confirmation screen
- Interactive buttons for checkout

3) Testing and Iteration

- Tested using Figma Present mode
- Improved UI spacing and alignment
- Enhanced user experience based on feedback

Phase 4: Cutover

This is the final phase where the system is prepared for deployment.

◆ 1) Finalization

- Completed final prototype in Figma
- Exported screens for documentation
- Ready for development

◆ 2) User Support & Documentation

- UI flow clearly explained
- Screens annotated for developers
- Prototype ready for sharing
