

EXPERIMENT 5

ROLL NO: 240701178

NAME: HARRISH LS

Create a flowchart and wireframe for a mobile application using lucidchart

FLOWCHART:

The process starts when the user logs into the ride booking app, enters the pickup and drop locations, and the system checks for available drivers and displays ride options. The user selects a ride type, confirms the ride request, and once a driver accepts, the driver is assigned and the ride begins until the passenger reaches the destination. After the ride is completed, the user makes the payment, the system verifies the payment and generates a receipt, the user rates the driver, and the process ends.

WIREFRAME DESIGN:

1.Login Screen

This is the first screen of the application where users enter their login credentials.

Features

- Phone number input
- Password field
- Login button
- Sign up option for new users

2. Pickup and Drop Location Selection

After logging in, the user selects the ride details.

Features

- Current location detection
- Enter destination field
- Map display
- Ride type options (Bike, Auto, Car)
- Book Ride button

2.3 Driver Assignment Screen

Once the ride is booked, the system assigns a driver.

Features

- Driver name
- Vehicle number
- Driver rating
- Driver location on map
- Track driver option

2.4 Payment Screen

After the ride is completed, the payment screen appears.

Features

- Total fare amount
- Payment methods
 - UPI
 - Card
 - Cash
- Pay Now button

2.5 Ride Completion Screen

This is the final screen of the process.

Features

- Ride completion confirmation
- Thank you message
- Driver rating option
- Done button
