MINDMAZE

YOU'RE LOGIN SUCESSFULLY

INSTRUCTION

1. Setup the Puzzle
Arrange the puzzle pieces, cards, or clues in front of the players.
Make sure everyone understands the objective (e.g., complete the picture, solve the riddle, match pairs).
2. Explain the Rules
Tell players how they can move, match, or arrange pieces.
Define limits (time, number of moves, or attempts).
3. Start the Challenge
Begin the puzzle with a timer or signal.
Players must use logic, memory, or pattern recognition to progress.
4. Check Progress
Monitor if players are following the rules.
Offer hints only if the game design allows it.
5. Scoring & Winning
Award points for correct solutions, completed chunks, or fastest time.
Declare the winner based on highest score or quickest completion.

LEVELS

LEVEL 1

JUMBLED PUZZLE

1. Overall Game Flow (Big Picture)

MindMaze is a **visual memory + recall puzzle game**.

The player:

1. Logs in
2. Understands rules
3. Selects levels

4. Observes an image (encoding phase)
5. Reconstructs it from scrambled pieces (recall phase)
6. Receives feedback and score

The **recall phase** is the core cognitive challenge, supported by clean UI and minimal distractions.

2. Recall Phase – Cognitive Analysis (Core of the Game)

What is the Recall Phase here?

The recall phase occurs when:

- The full image is removed
- The image is broken into pieces
- The user must **mentally reconstruct the original image**

Cognitive Skills Engaged

- **Visual working memory** – remembering spatial position of image parts
- **Pattern recognition** – identifying edges, colors, textures
- **Spatial reasoning** – understanding how pieces fit together
- **Attention & focus** – avoiding confusion from similar-looking pieces
- **Decision-making** – choosing correct piece placement

This mirrors classic **episodic memory recall**, where users retrieve stored visual information under mild pressure.

3. UX Analysis (User Experience Perspective)

Strengths

- Simple, consistent color palette → reduces cognitive overload
- Clear screen-to-screen progression → low learning curve
- Minimal UI elements → user focuses on the puzzle
- Visual feedback (score, completion) → reinforces motivation

UX Considerations

- Large puzzle pieces help prevent frustration

- Clear labels like *LEVEL 1*, *JUMBLED PUZZLE*, *COMPLETED* guide users
- Buttons placed centrally → easy reach and recognition

Overall UX supports **flow state**—users can stay engaged without confusion.

4. Purpose of Each Screen (Screen-by-Screen Analysis)

1. Welcome / Login Screen

Purpose

- Entry point to the game
- Establishes game identity (MindMaze)

Cognitive Role

- No cognitive load yet
- Prepares user mentally for gameplay

Key UI Components

- App title
- Login buttons (Guest, Google, Facebook)
- Visual puzzle-themed images

2. Login Success Screen

Purpose

- Confirms successful authentication
- Builds user confidence

UX Importance

- Immediate feedback reduces uncertainty
- Keeps user moving forward

Key UI Components

- Confirmation message
- Branding elements
- Decorative images

3. Instruction Screen

Purpose

- Explains rules, objectives, and scoring

Cognitive Role

- Sets mental model of the game
- Reduces errors during gameplay

Key UI Components

- Step-by-step text instructions
- Clear headings
- Minimal graphics to avoid distraction

4. Levels Screen

Purpose

- Shows progression path
- Allows users to anticipate difficulty

Cognitive Role

- Goal setting
- Motivation through visible progress

Key UI Components

- Level nodes
- Connecting path
- Simple numeric indicators

5. Level Introduction Screen (Full Image Display)

Purpose

- **Encoding phase**
- User memorizes the image

Cognitive Role

- Visual encoding into short-term memory
- Focused observation

Key UI Components

- Single centered image
- Level label
- No extra buttons → attention is controlled

6. Puzzle Preview Screen (Image Split)

Purpose

- Shows image segmentation
- Prepares player for manipulation

Cognitive Role

- Transition from encoding to recall
- Helps user understand puzzle structure

Key UI Components

- Grid-based image split
- Clear borders
- Level heading

7. Jumbled Puzzle Screen (Recall Phase)

Purpose

- Main gameplay screen
- User reconstructs image from memory

Cognitive Role

- **Recall + problem-solving**
- Active memory retrieval

Key UI Components

- Scrambled image tiles

- Clear puzzle area
- Minimal distractions
- Visual grouping of pieces

8. Score / Completion Screen

Purpose

- Feedback and closure
- Reinforcement and replay motivation

Cognitive Role

- Reward processing
- Performance evaluation

Key UI Components

- Score display (e.g., 5/5)
- Completion message
- Action buttons: Start, Resume, Play Again

5. UI Component Design Analysis

Buttons

- Rounded → friendly and non-threatening
- Clearly labeled → recognition over recall

Typography

- Simple, readable fonts
- Strong hierarchy (headings vs content)

Color Scheme

- Muted background → reduces eye strain
- Light UI elements → draw attention to actions

Layout

- Centered content → natural focal point
- Consistent margins and spacing → visual comfort

6. Summary (Why This Design Works)

- **Cognitively aligned:** Encoding → Recall → Feedback
- **UX-friendly:** Simple navigation, minimal load
- **Purpose-driven screens:** Each screen has one clear goal
- **Strong recall phase:** Encourages memory, reasoning, and engagement
